UI v/s UX

Shree Nakoda

UI v/s UX are two important concepts in app and website development. They work together but have different purposes

UI - User Interface

UI refers to the visual appearance of an application or website.
It focuses on what the user sees and interacts with
Examples -
- Buttons & icons
- Colours & fonts
- Images & layouts
- Navigation menus
- Login Page design

UX - User Experience

UX refers to the overall experience a user has while using an application or website.
It focuses on how easy, smooth and convenient the application is to use.
Examples -
- How easily users can log in
- How quickly users can find a product
- whether navigation is simple.
- How many steps are required to complete a task
- whether the application is user-friendly

Difference b/w UI and UX

UI	UX
- User interface	- User Experience
- focuses on appearance	- focuses on experience
- Deals with visual design	- Deals with usability
- Includes buttons, colours, font	- Includes navigation, accessibility, user flow
- Makes an app attractive	- Makes an app easy to use

Simple Real-Life Example

Imagine you are using a shopping application.

- UI: The attractive product images, colourful buttons & stylish layout.
- UX: How easily you can search for a product, add it to your cart and complete payment

Conclusion

UI = How application looks

UX = How an applications works & feels to the user
